

NATTHANAN SUTENAN

AI Agent Builder / AI Automation Intern

☎ 091-068-5668 | Email: natthanan.sute@gmail.com | Chiang Rai, Thailand

GitHub: github.com/natthanansute

PROFESSIONAL SUMMARY

Fourth-year Computer Engineering student at Mae Fah Luang University, interested in building AI systems that can plan tasks, use tools and APIs, process multimodal information, and automate multi-step workflows. Practical experience comes primarily from academic and personal projects, including an AI-assisted internship screening agent and an ongoing data science project exploring AI-assisted decision support. Prefers practical automation and AI-agent-oriented work over traditional web or app development. Seeking an AI Agent Builder / AI Automation internship to apply and grow these skills in a real industry environment.

EDUCATION

Bachelor of Engineering (B.Eng.) in Computer Engineering

Aug 2023 - Present

Mae Fah Luang University · GPAX: 3.82

PROJECTS EXPERIENCE

Expressway Accident Severity Prediction & AI Decision Support System | Group Project · Ongoing

2026 - Present

- Group project exploring whether accident characteristics (time, weather, road conditions, cause, location) can be used to predict severity and support emergency response planning, using data relevant to the Expressway Authority of Thailand (EXAT).
- Contributing to dataset evaluation, data cleaning, and exploratory analysis; identified patterns such as roughly 30% of accidents involving injury or death, with higher concentrations on specific expressways and factors like wet roads and night driving under investigation.
- Currently exploring an AI-assisted decision layer to help interpret prediction results and generate context-aware recommendations for emergency response. This component is still at the design/prototype stage.

Tools: Python, Codex

SIDE PROJECTS

AI-Assisted Internship Screening Agent | Personal Project

2026

- Built an internship screening workflow using AI-assisted development, connecting Facebook post collection, Gemini analysis, rule-based validation, and Telegram notifications.
- Defined screening criteria and structured JSON outputs to distinguish target internships from unrelated roles, with a manual-review path for uncertain results.
- Integrated text and image analysis to handle both written job descriptions and recruitment posters.
- Iteratively tested the workflow and investigated API failures, Facebook session issues, duplicate notifications, and scheduling delays.

Tech Stack: Python · Gemini API · Playwright · SQLite · Telegram Bot API · GitHub Actions

Pico W Web-Based Computer Interaction Automation System | Personal Project · Ongoing

2025

- Designing and developing a web-based control interface for configuring and controlling a Raspberry Pi Pico W-based computer interaction automation system.
- Building automated input control logic to reduce repetitive manual computer interactions, continuously testing and refining system behavior.

SKILLS

Programming Python, C#, Java, JavaScript, MATLAB

AI & Automation Google Gemini API (Vision & Flash), Multimodal AI Processing, Browser Automation (Playwright), Workflow Automation

Web & Backend HTML, CSS, Node.js, Express.js

Database MySQL, SQL, SQLite, Relational Database Design

Tools & Deploy Git, GitHub, GitHub Actions (CI/CD), Docker, Telegram Bot API

Core CS OOP, Data Structures & Algorithms, Software Testing Fundamentals, API/Tool Integration

Soft Skills Problem-solving, self-directed learning, adaptability, and initiative.
