PROFESSIONAL SUMMARY

Fourth-year Computer Engineering student at Mae Fah Luang University with broad academic foundations in programming, software development, databases, and web application development, including coursework exposure to software testing and quality assurance concepts. Detail-oriented and interested in software quality, test case design, and automation testing as a way to build more reliable systems. Seeking a QA / Automation QA internship to apply classroom knowledge to real testing workflows, learn industry QA practices, and grow into a software testing role.

EDUCATION

Bachelor of Engineering (B.Eng.) in Computer Engineering

Aug 2023 - Present

Mae Fah Luang University · GPAX: 3.82

PROJECTS EXPERIENCE

Smart Indoor Air Quality Monitoring & Filtration System | Senior Project · Ongoing

2025 - Present

- Contributed to a university team project focused on monitoring indoor air conditions and controlling an air filtration system.
- Participated in system integration and testing as part of the project team, helping verify that hardware and software components worked together correctly.

Room Reservation System | Web Application · Group Project

2024

- Group web application letting students request room bookings, lecturers approve/reject requests, and staff manage room and time-slot availability.
- Designed part of the system structure and workflow; developed sections of the app using JavaScript, Node.js, and Express.js.
- Designed and maintained a spreadsheet to verify the API specification against expected behavior and booking rules.

Tech Stack: HTML, CSS, JavaScript, Node.js, Express.js, MySQL

Markudhet — Software Project Management & System Design | Group Project

2025

- Group project planning and designing a digital market management platform, from initiation through system analysis, design, and testing.
- Defined project objectives, scope, and requirements; developed the SDLC, project plan, and a Business Model Canvas.
- Designed the system using Use Case Diagrams, an E-R Diagram, Data Dictionary, and Sitemap; built UI/UX designs and prototypes in Figma.
- Wrote test cases for the Markudhet application to verify expected system behavior.

Tools: Figma, Google Sheets, Google Docs, Diagramming Tools

SIDE PROJECT

Pico W Web-Based Computer Interaction Automation System | Personal Project · Ongoing

- Designing and developing a web-based control interface for configuring and controlling a Raspberry Pi Pico W-based computer interaction automation system.
- Building automated input control logic to reduce repetitive manual computer interactions.
- Continuously testing and refining system behavior and configurations as part of ongoing development.

SKILLS

Programming C#, Java, Python, JavaScript, MATLAB

Web & Backend HTML, CSS, Node.js, Express.js

Database MySQL, SQL, Relational Database Design

Tools Git, GitHub, Docker, Figma

Core CS & QA OOP, Data Structures & Algorithms, Software Testing Fundamentals, API Spec Verification

Soft Skills Problem-solving, self-directed learning, adaptability, and initiative.
